

# BUS BELT

The automatic seatbelt that instantly adjusts to fit any size of passenger

## Bus Belt

Bus Belt the first automatic lap and diagonal seatbelt to be designed specifically for the Bus and Coach market. The unique slide adjuster enables a child of 4 years old and upward to wear the belt comfortably with the webbing correctly located across the chest. Adjusting the shoulder slide upwards, the Bus Belt will fit the largest adult.

## 4pt Bus Belt

is designed to fit in applications where an anchorage is provided in the upper part of the seat backrest for the provision for a top guide loop. With the reel mounting vertically or horizontally at the base of the backrest. Optional buckle lengths available.

## 3pt Bus Belt

With the tendency by seat manufacturers to integrate reel and webbing behind the seat trim, the 3pt 'Bus-Belt' is designed for applications where a top guide is not required on the belt but is provided in the seat structure.

## 3pt Bus Belt

## ↑ BODY-LOC ↓

### 'Bus-Belts' with 'Body-Loc'

By fully extracting all the webbing from the inertia reel & allowing it to retract around the wearer the seatbelt is locked around the wearer in a static mode. This is particularly desirable to elderly or infirm users where improved support for the upper body is required.

## 4pt Bus Belt
